

CAEPLEx

Thermo-mechanical finite-elements fully integrated into **Onshape**

Subscribe to the CAEplex app in the

Open your part, click on the plus sign, "Add application" and choose "CAEplex."
Pick the part studio to analyze, select the analysis type and click "Create case."

Step #1: Problem

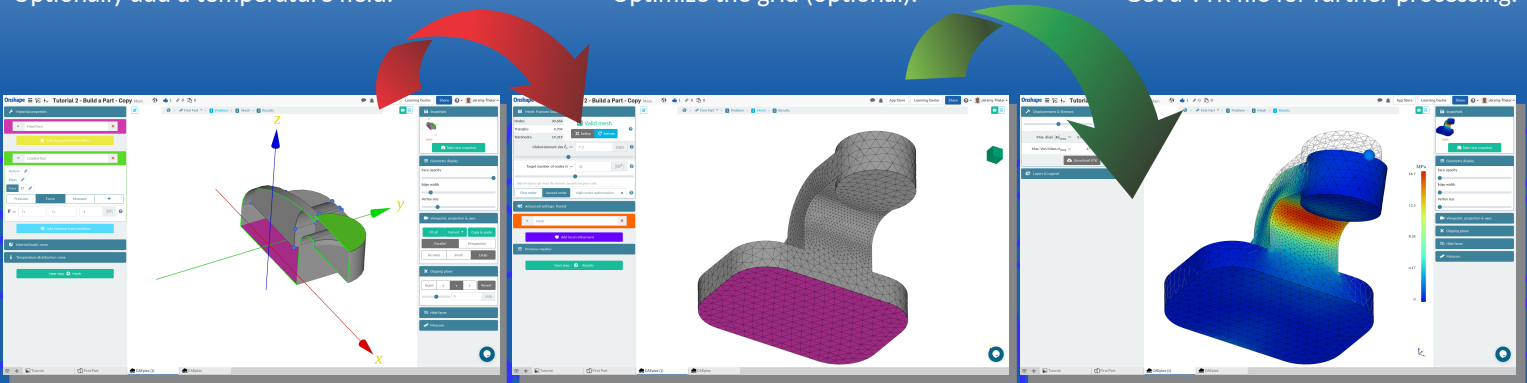

Set the material properties and pick which faces have displacement conditions and which have loads. Optionally add a temperature field.

Step #2: Mesh

Choose mesh size and order. Select meshing algorithm. Add local refinements as needed. Optimize the grid (optional).

Step #3: Results

Lively warp the displacements to see how the part deforms under load. View Von Mises and principal stresses. Get a VTK file for further processing.

CAEplex is an easy-yet-powerful paradigm-shifting platform for performing finite-element computations in the cloud directly from a web browser. It is developed by Seamplex, a startup that wants to shift engineering paradigms by delivering special IT-intensive projects for Industry 4.0. Onshape® is a registered trademark of Onshape Inc.
